

WHAT IS CLAIMED IS:

1 1. A method of accessing digital content comprising:
2 making available to a user a token having a
3 characteristic recognizable by a user as associated with the
4 digital content, said token including a machine readable
5 characteristic; and
6 automatically presenting the digital content to the user
7 in response to the user's selection of the token.

1 2. The method of claim 1 wherein the token characteristic
2 is an image or shape.

1 3. The method of claim 1 wherein the digital content
2 resides on a server device.

1 4. The method of claim 1 wherein the digital content is
2 audio or video content.

1 5. The method of claim 1 wherein the digital content
2 resides, or is primarily accessed by, a device that is not
3 located where the digital content is presented.

1 6. A method of accessing digital audio content over a
2 wireless network comprising:
3 making available a token having an image representing
4 the performer(s) and a particular performance of specific
5 digital content and including a machine readable code;
6 automatically identifying the code in response to a
7 user's selection of the token;
8 transmitting a digital stream over a wireless local area
9 network, the digital stream includes the specific digital
10 content corresponding to the token;

- 11 receiving the digital stream;
- 12 converting the digital stream to a standard audio input
- 13 signal; and
- 14 performing the digital audio on a local entertainment center.
